Dear 2015 Expo Providers,

I had so much fun at the Expo. Some of my favorite things were the wetlands, the archeological stuff, and the interactive booths.

I loved the wetlands because it was fun to learn about how people can tell if the land is a wetland and the role they play in our community. It was fun to learn and play at the same time at the booths.

I really liked the archeological stuff because I got to see how people built their houses before there was as much material and what a site looks like. I learned so much at the archeological booths and I would love to go back.

My favorite booths were the ones that were interactive because I learned more stuff when I got to help out with it. I think the interactive booths helped people learn a lot more because they got to be a part of it.
I think that both kids and adults learned a lot from the Expo. I think that it was the perfect combination of fun activity and learning. Please tell all the employees that they did a great job.

Sincerely,
Sophie 😊☉
Dear EXPO 2015 Providers,

Thank you for letting us learn about different things on our fun field trip. I learned a lot about recycling, which light bulbs to use, and other things. I thought it was cool to see the transformation from air plane seats to outfits for models. I liked all the hands on stuff there was. Over all I hope I had a really fun day.

Thank you.

Dear Expo 4-20-15

2015 Providers

Thank you for a fun field trip. I think that the Fish Center was the best because you saw and learned about fish. I love the giant catfish they pulled out of the sea of water. As the station where they talked about flooding and streams.

Also, I loved the station where they talked about water bottles and how we shouldn't really use them. Also thanks for all the posters and all the free books you gave us.

Sincerely,

[Signature]

Dear EXPO 2015 Providers,
Thank you so much for letting us have a splendid field trip and giving us lots of information about loads of interesting things.
My favorite part of the field trip was the part where we got to see loads of different animal skills.
I also liked learning about all the different kinds of moss. My favorite was the pin-cussion moss. SO SOFT!
Here are some pictures:

[Drawings of people having a good time]

Thank you for this lovely field trip.
BYE.
Sincerely, Lizzie S. 5-0
Dear EXPO 2015 Providers,

Thank you for letting us come to the Expo. I had so much fun!
I learned new facts that I never knew before, like I now know that there is a tracking device for fish. (Which was really cool.) I learned that Sea Otter's poop is silver. And I learned where scientists put Carbon Dioxide.

I got to look at water and what is inside it by looking through a microscope. I never knew that Fluorite was our state mineral but now I do thanks to Mrs. Happ. (My best friend’s mom.) It was really fun to go to the Expo and I hope that the 5th graders next year will like it too! Thanks for letting us go to the Expo!

Love Your Friend,

Addie W

Dear EXPO 2015 providers,

I really enjoyed your stations and places that you let us see. It was the most fun field trip I have ever been on! Everyone I saw had huge smiles, and were chatting their heads off about their station! Thank you so much!

Sincerely,

Halle K.

Dear expo 2015 provider,

I really had fun at the expo on Friday April 17. I had fun digging for rocks and minerals in the sand and in the other rocks. I had fun touching and looking at the fish. I don't teach many of the fish, I had fun learning about history and how you can see it if you just dig deep enough and after I got a trophy roll, I had fun learning about air leaks in a house and getting my picture taken. The matt fan I had was at lunch but that's only because I was starving and I got to talk with my friend.

Sincerely,

April 20th, 2015

Dear Naturally Illinois EXPO 2015 Providers,

Thank you for hosting the Naturally Illinois EXPO this year. It was really fun, I learned a lot, and I really enjoyed it.

I learned about water, animals, fossils and minerals, electricity, and much more. My favorite thing I learned about was Erosion.

Learning about Erosion was very interesting. I already knew that water caused Erosion, but I always thought that after so much, it stopped. Now I know that as long as there is water, the substance can Erode.

My favorite fun activity was the Fossil and Mineral Dig.

Please don't go—I really enjoyed the field trip and I'm sure everyone else did too. Thank you for hosting it.

Sincerely,

Olivia R.
Dear Expo 215 Providers

I hope you have one next year because it was so fascinating learning about the water, rocks, and animals. I mostly loved learning about the insects and the study of fish. I really liked the big catfish that was awful. So thank you for having us and hope to come in future.

Sincerely,
Colton M
